ZK-VPR BAC 167 Strikemaster

THE BAC 167 Strikemaster is a single-engine two-seat ground-attack and trainer jet aircraft produced by the British Aircraft Corporation. ZK-VPR, which has been

imported into New Zealand by Brian Hall of Christchurch, was originally under the UK registration G-VPER. It was built in 1976 and was part of "Team Viper", the only Strikemaster & Hunter Team in the World, named after the Rolls Royce Viper engine found in the Strikemaster.

Grandchild of the propeller-driven Hunting Percival Provost training aircraft, and close sibling to the Jet Provost trainer, the two-seat, jet-propelled BAC 167 Strikemaster multi-role attack aircraft was deemed especially well-suited for advanced training, counterinsurgency, ground attack and reconnaissance functions.

16 Strikemaster aircraft were acquired by the Royal New Zealand Air Force in 1972, use of the aircraft was reduced from 1981 onward after cracking was discovered in the main wing structures. Turbulence and high usage were given as the probable cause. Considering the necessary re-winging of the aircraft to be an unwarrantable expense,

the RNZAF retired them in 1994, replacing them with the Aermacchi MB339-CB.

This is the second Strikemaster to recently return to NZ skies and we look forward to seeing the pair of them flying together.

ZK-PVP Beagle Pup and ZK-RMC Taylor Titch

JOHN Faulkner and wife Rona Calverley have recently imported two aircraft into New Zealand. The first which is John's is a 1969 Beagle B.121 Series 2 Pup. The Beagle Pup is a 1960s British two-seat single-engine training and touring aircraft built by Beagle Aircraft Limited.

The Pup was designed as an all-metal two-seat aerobatic aircraft or a four-seat touring aircraft. The prototype first flew in April 1967 and the first delivery was to the Shoreham Flying School in April 1968. The aircraft was very popular and sold to flying clubs and private users worldwide. John, who is a pilot for Qatar Airways has owned the Beagle Pup since 2003 under its UK registration of G-AXIF changing to ZK-PVP on arrival in NZ.

The second aircraft imported by this team is Rona's Taylor Titch. Also from the UK it was built in 1987. The Titch, designed by John F Taylor (and named after his Taylor Mono test pilot Titch Holmes),

was a result of a request for an aircraft with higher performance than the Taylor Monoplane. Taylor built the prototype at Essex between 1965 and 1966. It first flew at Southend Airport on 4 January 1967. Its all wood construction is similar to the Monoplane but has fewer metal fittings than the Mono, and full size wing

rib plans are supplied for the tapered wing panels. It will be great to see a Taylor Titch once again flying in New Zealand closely followed by John Best's Titch in Blenheim.

ZK-FZR Staaken Flitzer Z-21 a

MAX Saunders, a well known member of the homebuilt movement, has just completed his latest plans built aircraft. It is a Staaken Flitzer Bi-plane. Despite the German name, the 2.2 litre VW engine and the look of the aircraft, it was actually designed by the British aviation artist and designer Lynn Williams. The Flitzer first flew in the early 1990s in the UK and there are about 6 flying, mostly in the UK and one in Western Australia. Max's will be the first to fly in New Zealand although Brian Anderson's one is very close to completion.

Max started construction in 2003 but took a year off in the middle to build his Jabiru. The Flitzer was built from very

detailed plans which are comprehensively illustrated and contain many perspective, exploded views of components. Max says some builders have even framed some of the sheets as they are that impressive.

The aircraft is all wood construction using spruce for the structure and birch ply on the fuse. Dacron fabric was used for covering. The paint scheme regalia is the design of Lynn Williams to represent the Staaken Flying company/club of Berlin and is done with small brushes and lots of time consuming masking. Max has built absolutely everything on this bi-plane including the wooden propeller to suit the VW engine, all the metal fittings and the bicycle style undercarriage. At this stage the aircraft is finished apart from some engine running and a final inspection, so should be set to fly very soon. Max will be test flying the aircraft from the Otaki Airfield himself.
