ZK-MCM Gippsland GA8

THE 8th Gippsland GA8 Airvan to join the CAA register has been brought in from Australia by Milford Sound Flights Limited. Milford Sound Scenic Flights is one of the region's most experienced flightseeing operators, flying visitors to Milford Sound for over 20 years. They currently operate a fleet of aircraft including fixed wing and helicopters. The Gippsland arrived in February and will soon be branded with company logos before replacing their Islanders/Cessna 207 in the tourist flightseeing role to Milford Sound. ZK-MCM is powered by a Lycoming IO-540 engine and has a three bladed Hartzell prop. The aircraft will also be used to evaluate the possibility of future Airvan purchases.

The Gippsland GA8 Airvan is a single engine utility aircraft manufactured by GippsAero of Victoria, Australia. The aircraft was designed to fill a market niche perceived by the manufacturer between the Cessna 206 and 208 models. It can seat eight including one pilot. It is used in various roles, including passenger services, freight, sightseeing, parachuting, observation and search and rescue.

ZK-CSF, CSG, CSH and CSI Diamond DA-20 C1

THIS month the register sees four more Diamond DA-20 aircraft appearing on it for CTC Aviation Training (NZ) Ltd of Hamilton.

Sheryl Rogerson, Marketing and Recruitment Manager for CTC Aviation Training, says that these four new aircraft are additional to meet their growing demand – bringing their current fleet number to 39 with more aircraft on order.

The Diamond DA-20 design has proven to be robust and economical in flight training, offering good performance, comfort and excellent visibility. The aircraft are also very economical and 'safe' for ab-initio training, having good handling characteristics. Powered by Lycoming IO-240 engines, they cruise at 110 kts and stall at 44 kts (clean) or 36 kts (in landing configuration).

The DA-20 features control sticks (as opposed to yokes), low-mounted wings, a single fuel tank, a T-tail, and a castoring nose wheel.

All models have composite airframes constructed of glass- and carbon-fibre reinforced plastic. The nose wheel of the DA-20 is not linked to the rudder pedals and turns while taxiing are made with

differential braking, with rudder steering becoming more effective as airspeed increases.

The DA20 is equipped with a bubble canopy vented by small windows on either side. Fixed seats (to provide better crash protection) are reclined but not adjustable; instead the rudder pedals can be easily moved fore and aft to accommodate pilots of different height. Various glass cockpit options are available.

All four new aircraft have arrived in New Zealand and will be on the line by the time this issue goes to print.

ZK-PMS Ultramagic S-50

THE Ultramagic S-50 is the first of its type in New Zealand and has been imported from Spain by Paul Hicks of Matamata. Paul says the attraction of this type of balloon is the ease by which it can be transported, being designed for pilots

who travel a lot and who need a light weight and easy to handle balloon with minimum crew. It takes Paul and his wife just 10 minutes to be ready for flight.

The two-person envelope weighs less than 50kg including bag. Manufactured completely from Ultralite nylon fabric, the envelope, with 16 gore 8 wire, uses the

Buying an aircraft? - We can help with checks and upgrades

latest light weight Kevlar load tapes. The basket is plywood. Side walls are made of a combination of durable Cordura covers filled with light weight composite materials. The MK21 burner, is a single burner but is fitted with double main valves, double liquid fire valves, double ultralight liquid pilot lights and double igniters. The balloon is rated to height of 21,500 feet and the envelope has a life of 350 hours.

Paul says they plan to do some flying with the new balloon in New Zealand before heading over to Australia.
