

**ZK-FDR Beech 200C**

**RECENTLY ARRIVED** from Australia, this Beech 200C aircraft is now owned and operated by Garden City Helicopters Ltd of Christchurch. The aircraft is available for executive charter all around NZ and will support the current Cessna Conquest II aircraft in air ambulance configuration as well as the NZ Flying Doctor Service.

The aircraft is well equipped with medical oxygen and specialised stretcher equipment, having been used by the Royal Flying Doctor Service in Australia. Selected for its size and performance, the Beech has a new paint scheme based on Garden City Helicopters livery and new interior including state of the art avionics.

**ZK-SRF Zenith CH 601 XL**

**IAN GLOVER** has recently completed his second Zenith aircraft. He explains that he decided on the Zenith 601 because it was the only aircraft he could comfortably get his surf board in, an important design feature for an avid surfer. Ian is also part of the helicopter surf squad that operates at Tauranga and plans to also use his Zenith to assist with surf patrols. Thus acquiring the registration SRF was almost mandatory.

This aircraft was a plans and material kit and only took the specified 900 hours to complete over 18 months. It first flew in September, has a 100hp Rotax and achieves a cruising speed of 110 to 120kts.

The simple stressed-skin semi-monocoque construction uses single curvature sheet-metal skins riveted to internal structural members. The sheet-metal skins, main wing spar, structural ribs, longerons, stiffeners and bulkheads are all fastened together using proven riveting methods. Ian says that she has flown beautifully on all her test flights and is far superior to his previous 601UL model.

**ZK-ZQA Boeing 737-800**

**QANTAS** New Zealand will be receiving six new Boeing 737-800 aircraft over the coming months to operate on trans-

Tasman services. The first, ZK-ZQA entered service during September and will initially operate the Auckland - Brisbane route. A function celebrating its arrival was held at Auckland Airport which included the handover of a commemorative plaque to the family members of Jean Batten and Sir William Hudson and representatives of the Katherine Mansfield Estate.

Qantas will be naming the new aircraft after New Zealand cultural, science and technology, exploration, and aviation pioneers. The first is named Jean Batten, to be followed by Sir William Hudson, Katherine Mansfield, Abel Tasman, Sir William Pickering and Sir Edmund Hillary. The aircraft are registered with the NZ Aircraft Operating Company Jetconnect Ltd and operated by a NZ based crew.

**ZK-YOG Eagle Gyroplane**

**THE NEWEST** gyroplane in NZ is ZK-YOG for Mark Humbke. Mark is a keen follower of YOGA and has recently been working in the middle East, learning to fly gyros at Tauranga during periods of leave. Mark plans to finish his qualifications and build experience with YOG before completing a NZ Safari with the aircraft next March.

# Aeromotive encourages LAME development

WHEN A maintenance organisation is looking to recruit more licensed engineers for its workshop, it needs to be able to claim a competitive edge for employment in its field of operation. Hamilton based Aeromotive are currently looking beyond their immediate recruitment requirement, and seeking to also contribute towards addressing the general industry shortage of experienced engineers, both licensed and otherwise.

## Customer Benefits

“The more LAMEs on the hangar floor the better the training for the younger engineers”, says Aeromotive Engineering Manager Brett Puddle. It also assists with the customer perception that when a qualified engineer with the backing of licences is on the job, their aircraft is getting the best of attention.

A licensed engineer brings to any maintenance organisation a depth of experience and knowledge at a high level. The customer benefits by the company having this pool of such experience on the workshop floor. As well, these experienced engineers knowingly and unknowingly impart their skills and knowledge to younger trainee engineers.

Aeromotive maintenance covers a wide spectrum of aviation from Beech B200 to DC3 to Diamond to GA and all in-between.

## Employee Benefits

Aeromotive are able to offer their engineering staff an increasing variety of work. The mainstay is general aviation airframe and component maintenance, repair and overhaul but in more recent times the field has opened up with the inclusion of Beech B200 King Air types at the upper GA level, classics in the form of DC 3 types and also the move into 21st century GA types such as the Diamond fleet operated by airport neighbours, CTC.

The fact that the company has been a major player in general aviation maintenance for more than 30 years also brings benefits in offering a stable environment in which to work. Aeromotive offers its LAME and AME employees regular in-house and external training along with participation in its MORE (Maintenance Overhaul and Repair Excellence) programme. This competitive edge programme is in place across all aspects of the organisation and empowers engineering staff to contribute towards company improvement and to become more self supervising.

Experienced tradesmen are also welcomed to the workshop floor. The recent employment of a number of tradesmen from offshore has resulted in those staff obtaining NZCAA licences. “Aeromotive finds that our offshore recruits often bring alternative values and cultures which add to the diversity of staff make up and these people can also have a significant input into improving our methods and procedures” said Alan Thompson, Airframe Manager.

“We have a policy in place to encourage AMEs to become licensed along with a successful mentoring programme overseen by the QA Manager Steve Burrows” says Brett. “We can supply study material from our ever growing library and there is plenty of internal support for those who find having to open the books something of a hurdle, perhaps after being away from such an environment for some time. Also we find there is a fair amount of

valuable note trading resource held by individual LAMEs that can help kick start a programme for a newly aspiring LAME.” Brett says that Aeromotive will also pay the examination fee for employees sitting license subjects.

Both managers are keen to point out that Aeromotive doesn't wish to vacuum up all LAMEs in the GA sector, but they

do observe an aging pool of existing engineers that will shrink dramatically over the next five years. They don't believe the intake of newly qualified engineers is sufficient to sustain NZ LAME requirements for the next decade.

Brett and Steve consider that working for Aeromotive gives engineers the opportunity to see the whole process of a job through, alongside an extensive supporting organisation in the background. Coupled with the MORE programme, all Aeromotive staff can look towards improving what

they do, how they do it and enjoying an opportunity to actively change processes so that both the customer and the staff benefit.

## About KiwiFlyer

KiwiFlyer is the reference publication for the New Zealand aviation marketplace.

KiwiFlyer is published every two months and delivered FREE to every aircraft operator and aviation document holding business in NZ. Retail and other targeted distribution assures advertisers of the widest market coverage.

KiwiFlyer offers businesses promotional opportunities from informative commentary on products and services.

KiwiFlyer is the most cost competitive way for any aviation business to tell everyone in the NZ aviation market about their products, services, or recent achievements.

KiwiFlyer will help prepare your advertisement or write editorial on your business or new developments.

Call us to discuss your marketing programme or visit our website for more information and to download a rate card.
